PFLUON
NON-STICK COATING

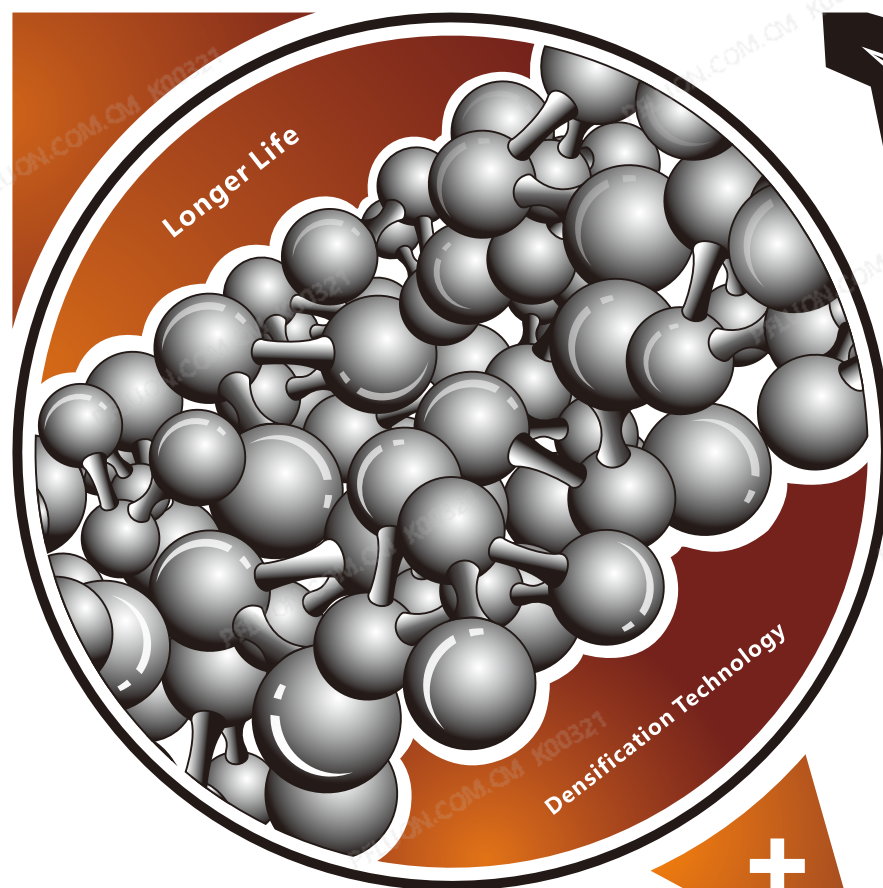

LGA 120 minutes

Extraordinary tough non-stick coating, longer life,
Suitability for demanding cooking application.

+ Extremely long-lasting abrasion & non-stick performance

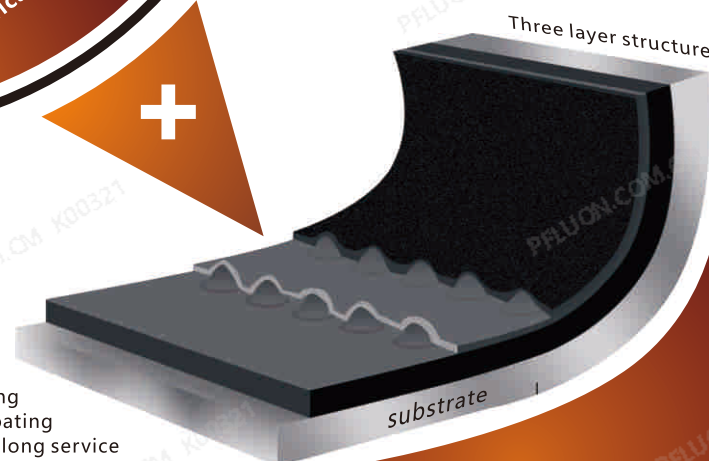

CREATED BY **PFLUON**

PLUS PLASTRON

Excellent non-stick performance, coupled with PFLUON Densification technology, equips PLASTRON coating with tough coating performance. More compact polymer coating structure makes non-stick coating more durable with super long service life. Under high-intensity cooking, it still maintains outstanding performance. PLASTRON coating features excellent adhesion, which can be more widely applied in different cooking utensils substrate: such as smooth stainless steel surface. It can also provide excellent non-stick cooking experience for more categories of cookware.

✦Extremely long-lasting abrasion & non-stick performance

OBVIOUSLY IMPROVEMENT

30000 TIMES

Abrasion	30 N / 21cm ² ; 5% detergent ; BS 7069:1988 & Q/PFL 001-2009 ;	30000 times
----------	--	-------------

25 CYCLES

Non-stick test after abrasion	1.5kg/21cm ² , after 1000 times abrasion test, then frying eggs; HG/T 4563;	25 cycles
----------------------------------	---	-----------

120 MIN

Vibration abrasion LGA test 120 minutes	Every 30 minutes check sureface, 300 rpm ; GB/T 32095;	PASS 120 min , gloss lost, the surface of the coating becomes rough;
---	---	--
